

Urza's Saga (TM) Frequently Asked Questions
Compiled by Mark L. Gottlieb
Document last modified March 24, 2010

An FAQ is a collection of clarifications and rulings involving the cards in a new Magic: The Gathering (R) set, including one that's new to the Magic Online (TM) platform. It's intended to make playing with these new cards more fun by clearing up the common misconceptions and confusion inevitably caused by new mechanics and interactions. As future sets are released, updates to the Magic (TM) rules may cause some of this information to become outdated. If you can't find the answer you're looking for here, please contact us at <www.wizards.com/customerservice>.

Urza's Saga booster packs, tournament packs, and theme decks go on sale in the Magic Online store at 9 a.m. (PST) on March 29, 2010.

The Urza's Saga set becomes legal for play in Classic, Classic (Vanguard), Commander, Freeform, Pauper, Singleton, Tribal Wars (Classic), and Urza's Saga Block Constructed formats on the day it goes on sale.

Urza's Saga release events begin Wednesday, March 31, 2010. Go to <http://www.wizards.com/magic/tcg/productarticle.aspx?x=mtg/tcg/urzasaga/productinfo> for more information.

The Urza's Saga expansion, originally released in 1998, is a 350-card, black-bordered set featuring 110 rares, 110 uncommons, 110 commons, and 20 basic lands. The Urza's Saga set is nonredeemable. Online cards from the Urza's Saga set can't be exchanged for physical Urza's Saga cards.

This FAQ has two sections, each of which serves a different purpose.

The first section ("General Notes") explains the new mechanics and concepts in the set.

The second section ("Card-Specific Notes") contains answers to the most important, most common, and most confusing questions players might ask about cards in the set. Items in the "Card-Specific Notes" section include full card text for your reference. Not all cards in the set are listed.

GENERAL NOTES

Info: Rules Changes

The rules of the Magic (TM) game have evolved over the years since the Urza's Saga set was originally released. Many card wordings, including creature types, have also significantly changed. Most Urza's Saga cards have been reworded in the Oracle card reference, which contains up-to-date text for all tournament-legal cards. Although the rules team has done its best to maintain cards' functionality, some changes are inevitable.

Keyword Ability: Cycling

If you have a card with cycling in your hand, you can pay its cycling cost and discard it to draw a new card.

Hush
{3}{G}
Sorcery
Destroy all enchantments.
Cycling {2} ({2}, Discard this card: Draw a card.)

The relevant rules for the cycling ability are as follows:

702.26. Cycling

702.26a Cycling is an activated ability that functions only while the card with cycling is in a player's hand. "Cycling [cost]" means "[Cost], Discard this card: Draw a card."

702.26b Although the cycling ability can be activated only if the card is in a player's hand, it continues to exist while the object is on the battlefield and in all other zones. Therefore objects with cycling will be affected by effects that depend on objects having one or more activated abilities.

* Cycling is an activated ability. Effects that interact with activated abilities (such as Stifle or Rings of Brighthearth) will interact with cycling. Effects that interact with spells (such as Remove Soul or Faerie Tauntings) will not.

Keyword Ability: Echo

Echo is a keyword ability that appears on permanents. Cards with echo have a casting cost that's lower than you might expect, but they also have a one-time upkeep payment the following turn.

Cradle Guard
{1}{G}{G}
Creature -- Treefolk
4/4
Trample

Echo {1}{G}{G} (At the beginning of your upkeep, if this came under your control since the beginning of your last upkeep, sacrifice it unless you pay its echo cost.)

The rules for the echo ability are as follows:

702.27. Echo

702.27a Echo is a triggered ability. "Echo [cost]" means "At the beginning of your upkeep, if this permanent came under your control since the beginning of your last upkeep, sacrifice it unless you pay [cost]."

702.27b Urza block cards with the echo ability were printed without an echo cost. These cards have been given errata in the Oracle card reference; each one now has an echo cost equal to its mana cost.

* Paying for echo is always optional. When the echo triggered ability resolves, if the controller of the permanent can't pay its echo cost, or chooses not to, that player sacrifices that permanent.

* A permanent's echo ability will trigger during its controller's upkeep if it entered the battlefield since the beginning of its controller's last upkeep (including if it left the battlefield and came back during that time), or if its current controller took control of it since the beginning of his or her last upkeep.

* If a permanent with echo phases out then phases back in, its controller will not have to pay its echo cost as a result. (That player will still have to pay it as normal if that permanent entered the battlefield, or he or she took control of it, since the beginning of his or her last upkeep.) This is a reversal of previous rules.

Theme: "Free Spells"

A number of blue instant and sorcery spells in the Urza's Saga set have effects that allow their controllers to untap a number of lands equal to their converted mana costs as they resolve. In addition, a number of blue permanents in the Urza's Saga set have "enters the battlefield" abilities that allow their controllers to untap a number of lands equal to those permanents' converted mana costs.

Rewind

{2}{U}{U}

Instant

Counter target spell, then untap up to four lands.

Great Whale

{5}{U}{U}

Creature -- Whale

5/5

When Great Whale enters the battlefield, untap up to seven lands.

* You don't choose which lands to untap until the instant spell, sorcery spell, or triggered ability resolves.

* You may untap any lands. This includes lands you didn't tap to produce mana used to cast the spell, lands you don't control, and lands that have shroud or otherwise can't be targeted by spells or abilities.

* If a "free" instant or sorcery spell is countered (either by another spell or ability like Cancel, or because all of its targets have become illegal), none of its effects happen. You won't get to untap any lands.

* If a "free" permanent enters the battlefield under your control as the result of a spell or ability, its "enters the battlefield" ability will still trigger even though it wasn't cast. You'll get to untap lands when the ability resolves.

Cycle: Recurring Auras

The Urza's Saga set contains several Auras that have the ability to return to their owner's hand whenever they're put into a graveyard from the battlefield.

Brilliant Halo

{1}{W}

Enchantment -- Aura

Enchant creature

Enchanted creature gets +1/+2.

When Brilliant Halo is put into a graveyard from the battlefield, return Brilliant Halo to its owner's hand.

* This ability triggers no matter how the Aura is put into a graveyard from the battlefield. It will work if the Aura is destroyed (such as by Naturalize) or if the Aura is put into the graveyard as a state-based effect (such as if the enchanted creature leaves play or can no longer be enchanted by the Aura).

* The ability triggers no matter who controlled the Aura at the time it was put into a graveyard from the battlefield.

* The ability doesn't trigger if the card is put into a graveyard from anywhere other than the battlefield.

* If the ability triggers, the Aura will be returned to its owner's hand only if it's still in the graveyard by the time the ability resolves.

Cycle: Growing Enchantments

The Urza's Saga set contains several enchantments with two abilities: One that allows its controller to put a verse counter on it at the beginning of each of his or her upkeeps, and one that lets its controller sacrifice the enchantment to do something based on the number of counters on it.

Serra's Liturgy

{2}{W}{W}

Enchantment

At the beginning of your upkeep, you may put a verse counter on Serra's Liturgy.

{W}, Sacrifice Serra's Liturgy: Destroy up to X target artifacts and/or enchantments, where X is the number of verse counters on Serra's Liturgy.

* In a sense, these enchantments behave like delayed-effect sorceries. You cast one, then you wait. The more turns you wait before sacrificing it to get its effect, the bigger that effect will be.

* Putting a verse counter on the enchantment when its upkeep trigger resolves is always optional.

* The sacrifice ability's effect checks the enchantment's last existence on the battlefield to see how many verse counters were on it.

* There are also two artifacts in the set that behave this way: Barrin's Codex, which accumulates page counters, and Lotus Blossom, which accumulates petal counters.

Cycle: Sleeping Enchantments

The Urza's Saga set contains several enchantments that become creatures when a certain condition has been met.

Opal Gargoyle

{1}{W}

Enchantment

When an opponent casts a creature spell, if Opal Gargoyle is an enchantment, Opal Gargoyle becomes a 2/2 Gargoyle creature with flying.

* Most of these enchantments have a triggered ability that, when it resolves, causes the enchantment to become a creature. Some have an activated ability that does that. The ability specifies the power, toughness, creature type(s), and additional abilities of the creature.

* Once the ability resolves, the permanent is no longer an enchantment. The card type "creature" overwrites the card type "enchantment."

* Everything else about the permanent remains the same. For example, Opal Gargoyle turns into a white creature that's still named Opal Gargoyle. Its mana cost is still {1}{W}. If it has any counters on it, or has been affected by any spells or abilities, they continue to affect it.

* The ability's effect has no duration. The permanent remains a creature until the game ends, it leaves the battlefield, or some other effect causes it to become another card type. Similarly, it retains each of its new characteristics until the game ends, it leaves the battlefield, it ceases to be a creature, or some other effect changes any or all of those characteristics.

* When an enchantment becomes a creature, that doesn't count as having a creature enter the battlefield. The permanent was already on the battlefield; it only changed its types. Abilities that trigger whenever a creature enters the battlefield won't trigger.

* A "sleeping enchantment" that turns into a creature may be affected by the "summoning sickness" rule: It can attack, and its activated abilities with {T} in the cost can be activated, only if its controller has continuously controlled that permanent since the beginning of his or her most recent turn. Note that summoning sickness cares about when that permanent came under that player's control, not when it became a creature.

* Some "sleeping enchantments" have abilities that trigger when an opponent casts a spell of a certain kind. For example, Opal Gargoyle's ability triggers when an opponent casts a creature spell. If an opponent casts a spell that meets the criteria, these abilities trigger and resolve (causing the "sleeping enchantment" to become a creature) before that spell resolves.

* Some "sleeping enchantments" have abilities that trigger when an opponent plays a land of a certain kind. If an opponent plays a land that meets the criteria, these abilities trigger and resolve (causing the "sleeping enchantment" to become a creature) after the land enters the battlefield. If that land has an "enters the battlefield" ability with a target, the "sleeping enchantment" will not yet be a creature at the time the target is chosen.

* Each triggered ability that animates a "sleeping enchantment" has an "intervening 'if' clause" that checks to see if it's still an enchantment. That means (1) the ability won't trigger at all unless the permanent is still an enchantment at the time the trigger event happens, and (2) the ability will do nothing if the permanent has somehow ceased to be an enchantment by the time the ability resolves. (So even though each of these permanents retains its triggered ability even after becoming a creature, they won't trigger again while those permanents are creatures.)

Cycle: Runes of Protection

The Urza's Saga set contains a number of white enchantments with cycling and activated abilities that can prevent damage from a source with a certain characteristic.

Rune of Protection: Black

{1}{W}

Enchantment

{W}: The next time a black source of your choice would deal damage to you this turn, prevent that damage.

Cycling {2} ({2}, Discard this card: Draw a card.)

* You choose a source of damage as the activated ability resolves. The source you choose may be any of the following:

- a permanent
- a spell on the stack (including one that becomes a permanent)
- a card or token referred to by a spell or ability that's waiting to resolve
- a card or token referred to by a replacement or prevention effect that's waiting to apply
- a card or token referred to by a delayed triggered ability that's waiting to trigger
- in certain casual formats, a card in the command zone (such as a vanguard card or a plane card)

* As long as the source you choose meets one of the above criteria, it can be something that's not currently on the battlefield or on the stack. However, it must be a specific card or token referred to by something. You can't choose "Fireball," for example, just because you know your opponent has one in his or her hand.

* The source you choose may have shroud or otherwise be unable to be targeted by spells or abilities.

* The source you choose doesn't have to currently be capable of dealing damage. The prevention effect will apply to it anyway for the rest of the turn, and will work if it does become capable of dealing damage.

* If the source you choose is a permanent, the prevention effect will apply to the next damage dealt to you by that permanent, regardless of whether it's combat damage or damage dealt as the result of a spell or ability.

* If the source you choose is a spell on the stack that becomes a permanent when it resolves, the prevention effect will apply to the next damage that would be dealt to you this turn by that spell or (if no damage is prevented this way) the next damage that would be dealt to you this turn by the permanent that spell becomes.

* The source you choose must have the characteristic stated by the Rune's ability. (It must be white, blue, black, red, green, an artifact, or a land.) The next time that source would deal damage to you, it's checked to see if it still has that characteristic. If it doesn't, the prevention effect doesn't apply (though it isn't used up, so it could apply later in the turn if the source becomes the stated characteristic again and would deal damage to you again).

CARD-SPECIFIC NOTES

Abundance

{2}{G}{G}

Enchantment

If you would draw a card, you may instead choose land or nonland and reveal cards from the top of your library until you reveal a card of the chosen kind. Put that card into your hand and put all other cards revealed this way on the bottom of your library in any order.

* As you apply Abundance's effect instead of drawing a card, first announce your choice (land or nonland) out loud. Then start revealing cards from the top of your library. The first card you reveal that matches your choice is put into your hand. The rest are put on the bottom of your library in the order you choose.

* If you choose land but there are no land cards in your library, you'll reveal all the cards in your library then put them back in any order. Similarly, if you choose nonland but there are no nonland cards in your library, you'll reveal all the cards in your library then put them back in any order.

* If your library has no cards in it at all, you can still replace drawing a card with Abundance's effect. Nothing will happen, but since you're doing something else instead of drawing a card, you won't lose the game.

* If an effect would cause you to draw multiple cards, each individual draw may be replaced by Abundance's effect. Process the draws one at a time. If you use Abundance's effect to replace one of those draws, the revealed cards that you didn't put into your hand are put on the bottom of your library before you process the next draw. You'll know the result of the previous draw before you decide to choose land or nonland, or not use Abundance's effect at all, for the next one.

* If a spell or ability causes you to put cards in your hand without specifically using the word "draw," Abundance's effect ignores it.

* If two or more replacement effects would apply to a card-drawing event, the player who's drawing the card chooses what order to apply them. It's possible that after applying one of them, the others will no longer be applicable because the player would no longer draw a card. For example, if you control more than one Abundance and you would draw a card, each Abundance's replacement effect could apply. Once you use one, the rest are no longer applicable.

Academy Researchers

{1}{U}{U}

Creature -- Human Wizard

2/2

When Academy Researchers enters the battlefield, you may put an Aura card from your hand onto the battlefield attached to Academy Researchers.

* You can put an Aura card from your hand onto the battlefield this way only if that Aura can legally enchant Academy Researchers. For example, you can't put an Aura with "enchant land" or "enchant green creature" onto the battlefield attached to Academy Researchers (unless Academy Researchers somehow turned into a land or a green creature before the ability resolved).

* The Aura card is not selected until this ability resolves. Once you make your choice, it's too late for players to respond.

* If Academy Researchers gains protection from a certain characteristic while its triggered ability is on the stack, no Aura with that characteristic can be attached to it when the ability resolves.

* Giving Academy Researchers shroud while its triggered ability is on the stack will not prevent an Aura from being attached to it. Although a creature with shroud can't be targeted by an Aura spell, it can still have an Aura attached to it by an ability that doesn't target the creature. The same is true for other abilities that would prevent a creature from being targeted.-----

Angelic Chorus

{3}{W}{W}

Enchantment

Whenever a creature enters the battlefield under your control, you gain life equal to its toughness.

* This ability triggers only when a creature enters the battlefield from a different zone (and it enters under your control), or when a token creature is put onto the battlefield under your control. It won't trigger when you gain control of a creature that was already on the battlefield, and it won't trigger when a "sleeping enchantment" becomes a creature.

* If the creature has left the battlefield before the ability resolves, its last existence on the battlefield is checked to determine its toughness.

Antagonism

{3}{R}

Enchantment

At the beginning of each player's end step, Antagonism deals 2 damage to that player unless one of his or her opponents was dealt damage this turn.

* The ability triggers each turn. Whether damage was dealt to an opponent of the active player (the player whose turn it is) isn't determined until the ability resolves.

* The effect looks back over the entire turn to determine whether damage was dealt, even if Antagonism wasn't on the battlefield for any part of that turn.

* Damage dealt during the end step after Antagonism's ability has resolved has no effect on Antagonism.

* In a Two-Headed Giant game, Antagonism's ability triggers twice each turn: once for each player on the active team. If neither player on the opposing was dealt damage that turn, Antagonism will deal a total of 4 damage to the active team. If either player on the opposing team was dealt damage that turn, however, Antagonism won't do anything.

Arc Lightning

{2}{R}

Sorcery

Arc Lightning deals 3 damage divided as you choose among one, two, or three target creatures and/or players.

* You divide the damage as you cast Arc Lightning, not as it resolves. Each target must be assigned at least 1 damage.

Arcane Laboratory

{2}{U}

Enchantment

Each player can't cast more than one spell each turn.

* The turn that Arcane Laboratory enters the battlefield, its effect looks back over the entire turn to determine how many spells each player has cast so far. If a player has already cast one or more spells that turn (including Arcane Laboratory itself), that player won't be able to cast any more spells that turn.

Argothian Elder

{3}{G}

Creature -- Elf Druid

2/2

{T}: Untap two target lands.

* The ability can target any two lands. They don't have to be tapped.

Argothian Enchantress

{1}{G}

Creature -- Human Druid

0/1

Shroud (This permanent can't be the target of spells or abilities.)

Whenever you cast an enchantment spell, draw a card.

* If you cast an enchantment spell, Argothian Enchantress's second ability triggers and is put on the stack on top of that spell. The ability will resolve before the spell does.

Argothian Wurm

{3}{G}

Creature -- Wurm

6/6

Trample

When Argothian Wurm enters the battlefield, any player may sacrifice a land. If a player does, put Argothian Wurm on top of its owner's library.

* When Argothian Wurm enters the battlefield, first the active player gets the option to sacrifice a land, then each other player in turn order gets the same option. (A player may choose

to sacrifice a land even if a previous player has already done so.) If any player elected to sacrifice a land, Argothian Wurm is put on top of its owner's library. If all players declined, then nothing happens and Argothian Wurm stays on the battlefield.

Attunement

{2}{U}

Enchantment

Return Attunement to its owner's hand: Draw three cards, then discard four cards.

* Returning Attunement to your hand is the cost to activate its ability. That means that if you activate the ability, Attunement will already be in your hand by the time anyone can respond.

* If you return Attunement to your hand to activate its ability, one of the cards you discard as part of its effect may be Attunement itself.

Barrin, Master Wizard

{1}{U}{U}

Legendary Creature -- Human Wizard

1/1

{2}, Sacrifice a permanent: Return target creature to its owner's hand.

* You may target any creature on the battlefield with Barrin's ability, including Barrin itself.

* If you target a creature you control, you can sacrifice that creature as part of the activation cost. However, if you do, the ability will be countered for having an illegal target.

Brand

{R}

Instant

Gain control of all permanents you own. (This effect lasts indefinitely.)

Cycling {2} ({2}, Discard this card: Draw a card.)

* A token's owner is the player under whose control it entered the battlefield.

* If a permanent you own is enchanted with an Aura such as Confiscate that's controlled by someone else, you'll regain control of the enchanted permanent when Brand resolves. The Aura will not be removed. The Aura will still be controlled by the other player, but its effect will be overridden.

* Gaining control of a permanent you already control generally has no visible effect. The control-change effect will override any previous control-change effects, though (such as one that had caused you to gain control of one of those permanents only temporarily).

* Brand's effect has no duration. You'll retain control of each permanent you own until the game ends, it leaves the battlefield, or some other effect causes it to change control.

Breach

{2}{B}

Instant

Target creature gets +2/+0 and gains fear until end of turn. (It can't be blocked except by artifact creatures and/or black creatures.)

* Once a creature becomes blocked, causing it to gain fear won't have any effect that combat. Breach can preclude blocks if it's cast before the declare blockers step, but it can't undo blocks that have already been declared.

Bulwark

{3}{R}{R}

Enchantment

At the beginning of your upkeep, Bulwark deals X damage to target opponent, where X is the number of cards in your hand minus the number of cards in that player's hand.

* The number of cards in each player's hand is determined as the ability resolves.

* If the targeted opponent has more cards in hand than you do, or if you both have the same number of cards in hand, Bulwark deals no damage.

Carpet of Flowers

{G}

Enchantment

At the beginning of each of your main phases, if you haven't added mana to your mana pool with Carpet of Flowers this turn, you may add up to X mana of any one color to your mana pool, where X is the number of Islands target opponent controls.

* You may add mana to your mana pool with Carpet of Flowers just once during your turn, either at the beginning of your precombat main phase or at the beginning of your postcombat main phase. (Of course, since it's optional, you may choose not to do it at all.)

* This ability isn't a mana ability. It goes on the stack and players may respond to it. The ability may be targeted and/or countered.

* The ability checks for lands with the land type Island, not just lands with the name Island.

Catastrophe

{4}{W}{W}

Sorcery

Destroy all lands or all creatures. Creatures destroyed this way can't be regenerated.

* You choose whether to destroy all lands or destroy all creatures as Catastrophe resolves. Once you make your choice, it's too late for players to respond.

* If you choose to destroy lands, creature lands (such as an animated Treetop Village) destroyed this way can't be regenerated. Other lands may be regenerated. (Any regeneration shields would have to have been created before you chose lands.)

Cathodion

{3}

Artifact Creature -- Construct

3/3

When Cathodion is put into a graveyard from the battlefield, add {3} to your mana pool.

* This ability isn't a mana ability. It goes on the stack and players may respond to it. The ability may be targeted and/or countered.

* If Cathodion is destroyed due to combat damage, you'll add {3} to your mana pool during the combat damage step. Any of that mana you don't spend during that step will be emptied from your mana pool. (Mana pools empty as each step and phase ends.)

Cave Tiger

{2}{G}

Creature -- Cat

2/2

Whenever Cave Tiger becomes blocked by a creature, Cave Tiger gets +1/+1 until end of turn.

* This ability may trigger multiple times per combat. For example, if Cave Tiger becomes blocked by three creatures, this ability will trigger three times. Cave Tiger will wind up with a total of +3/+3 until end of turn, even if some or all of those

blocking creatures are removed from combat before the abilities resolve.

Chimeric Staff

{4}

Artifact

{X}: Chimeric Staff becomes an X/X Construct artifact creature until end of turn.

* This ability causes Chimeric Staff to become a Construct creature in addition to its other card types, subtypes, and supertypes.

* This ability also sets Chimeric Staff's power and toughness. If it was already a creature (due to its ability resolving earlier in the turn, for example), this will overwrite the previous effect that set its power and toughness. Effects that had modified its power or toughness, such as the effects of Disfigure or Glorious Anthem, will continue to apply, no matter when they started to take effect. The same is true for counters that change its power or toughness (such as +1/+1 counters) and effects that switch its power and toughness.

* If you animate Chimeric Staff, it may be affected by the "summoning sickness" rule. You can attack with it only if it's been under your control since the beginning of your most recent turn. The same applies to activating its activated abilities that have {T} in their costs, should it gain any.

Citanul Flute

{5}

Artifact

{X}, {T}: Search your library for a creature card with converted mana cost X or less, reveal it, and put it into your hand. Then shuffle your library.

* If a creature card in your library has an {X} in its mana cost, the value of X is considered to be 0 for the purposes of determining its converted mana cost. The converted mana cost of a creature card in your library with mana cost {X}{G}, for example, is 1.

* The X in Citanul Flute's activation cost can be 0. If it is, you can find a creature card with converted mana cost 0, such as Ornithopter or Shifting Wall, if you have one in your library. Even if you don't, tapping Citanul Flute still lets you look through your library and shuffle it.

Citanul Hierophants

{3}{G}

Creature -- Human Druid

3/2

Creatures you control have "{T}: Add {G} to your mana pool."

* Citanul Hierophants grants the mana ability to each creature you control, including itself.

Claws of Gix

{0}

Artifact

{1}, Sacrifice a permanent: You gain 1 life.

* You may sacrifice Claws of Gix to pay its own activation cost. If you do, you still gain 1 life.

Confiscate

{4}{U}{U}

Enchantment -- Aura

Enchant permanent (Target a permanent as you cast this. This card enters the battlefield attached to that permanent.)

You control enchanted permanent.

* If you enchant an Aura with Confiscate, you don't move that Aura. It remains attached to whatever it was already attached to. You're now the Aura's controller, but depending on the Aura's abilities, that may not change what it does. For example, Fertile Ground says "Whenever enchanted land is tapped for mana, its controller adds one mana of any color to his or her mana pool (in addition to the mana the land produces)." The land's controller will get the extra mana regardless of who controls Fertile Ground.

* If you enchant an Equipment with Confiscate, you don't move that Equipment. It remains attached to whatever it was already attached to. However, now you can activate that Equipment's equip ability, which can attach it to one of your creatures.

Contamination

{2}{B}

Enchantment

At the beginning of your upkeep, sacrifice Contamination unless you sacrifice a creature.

If a land is tapped for mana, it produces {B} instead of any other type and amount.

* This effect changes both the type of mana produced and the amount. For example, if a land that's tapped for mana would add

{U}{U} to its controller's mana pool, it adds {B} to that player's mana pool instead.

* If two or more replacement effects would apply to a mana-producing event, the player who would add that mana to his or her mana pool chooses what order to apply them.

* Contamination won't directly affect triggered mana abilities, such as the ones from Mana Flare or Fertile Ground. However if such an ability cares about what mana a land produced (as Mana Flare does), it will take Contamination's effect on that land into account.

Corrupt

{5}{B}

Sorcery

Corrupt deals damage equal to the number of Swamps you control to target creature or player. You gain life equal to the damage dealt this way.

* You gain life equal to the damage dealt by Corrupt, not the number of Swamps you control. If any of the damage is prevented or replaced with a different effect, you won't gain life for that damage. Keep in mind that regeneration effects don't replace damage, and that a creature's toughness doesn't limit the damage that can be dealt to it. If Corrupt deals 5 damage to a creature with 1 toughness, for example, you'll gain 5 life.

* Corrupt counts the number of lands you control with the land type Swamp, not just lands you control with the name Swamp.

Curfew

{U}

Instant

Each player returns a creature he or she controls to its owner's hand.

* First the player whose turn it is chooses a creature he or she controls (if that player has any), then each other player in turn order chooses a creature he or she controls, then all chosen creatures are returned to their owners' hands at the same time. As a player makes his or her choice, that player will know all the previous choices that have been made.

Dark Hatchling

{4}{B}{B}

Creature -- Horror

3/3

Flying

When Dark Hatchling enters the battlefield, destroy target nonblack creature. It can't be regenerated.

* The "enters the battlefield" ability is not optional. If you're the only player who controls a nonblack creature, you'll have to target one of your own.

Dark Ritual

{B}

Instant

Add {B}{B}{B} to your mana pool.

* Dark Ritual is an instant, so it can be cast only at the normal time an instant can be cast. You can't cast it as though it were a mana ability.

Darkest Hour

{B}

Enchantment

All creatures are black.

* If multiple effects modify a creature's color, apply them in timestamp order. For example, if Fylamarid's ability (which says "Target creature becomes blue until end of turn") resolves, then Darkest Hour is put onto the battlefield, the targeted creature will be black. However, if those events happened in the opposite order, that creature would be blue.

Defensive Formation

{W}

Enchantment

Rather than the attacking player, you assign the combat damage of each creature attacking you. You can divide that creature's combat damage among any of the creatures blocking it.

* You don't determine which of your opponents' creatures attack, or which players and/or planeswalkers they attack. Defensive Formation only modifies the assignment of combat damage.

* Defensive Formation has no effect on creatures attacking planeswalkers you control.

* If a creature that's attacking you is blocked by multiple creatures, the attacking player still determines their damage assignment order. However, when you assign the combat damage from those attackers, you may ignore the damage assignment order. You may divide the combat damage of each attacking creature as you like among each creature blocking it, regardless of whether any of them is assigned lethal damage.

* If a creature that's attacking you has trample, the trample rules still apply. You may assign combat damage from that creature to you only if each of the creatures blocking it is assigned lethal damage.

* If a creature that's attacking you says that its controller may have it assign its combat damage as though it weren't blocked (as Rhox does, for example), you choose whether that creature does so.

Diabolic Servitude

{3}{B}

Enchantment

When Diabolic Servitude enters the battlefield, return target creature card from your graveyard to the battlefield.

When the creature put onto the battlefield with Diabolic Servitude is put into a graveyard, exile it and return Diabolic Servitude to its owner's hand.

When Diabolic Servitude leaves the battlefield, exile the creature put onto the battlefield with Diabolic Servitude.

* If Diabolic Servitude leaves the battlefield before its first ability has resolved, its third ability will trigger and do nothing. Then its first ability will resolve and return the targeted creature card to the battlefield. It will remain there indefinitely; Diabolic Servitude's second and third abilities can't have any effect on it.

* If the creature put onto the battlefield with Diabolic Servitude leaves the battlefield but isn't put into a graveyard (it's exiled or it's put into its owner's hand or deck), Diabolic Servitude loses track of it. Diabolic Servitude will simply remain on the battlefield. If that creature card is put back onto the battlefield later, it will be a new permanent with no relationship to Diabolic Servitude.

* If the creature put onto the battlefield with Diabolic Servitude is put into a graveyard, Diabolic Servitude's second ability will trigger. If a different effect removes that creature card from the graveyard before the ability resolves, that ability can't exile it. It will still return Diabolic Servitude to its owner's hand.

Disorder

{1}{R}

Sorcery

Disorder deals 2 damage to each white creature and each player who controls a white creature.

* If a player controls one or more white creatures, Disorder will deal 2 damage to that player (not 2 damage per white creature).

Dromosaur

{2}{R}

Creature -- Lizard

2/3

Whenever Dromosaur blocks or becomes blocked, it gets +2/-2 until end of turn.

* When Dromosaur blocks or becomes blocked, this ability triggers just once, no matter how many creatures Dromosaur blocked or became blocked by.

Electryte

3RR

Creature -- Beast

3/3

Whenever Electryte deals combat damage to defending player, it deals damage equal to its power to each blocking creature.

* This ability triggers and resolves during the combat damage step, after the blocking creatures have already dealt their combat damage.

* If Electryte has somehow gained first strike or double strike, its ability triggers and resolves during the first combat damage step, after all blocking creatures with first strike or double strike have dealt combat damage, but before other blocking creatures have. (If Electryte has double strike, its ability will trigger again during the next combat damage step.)

Enchantment Alteration

{U}

Instant

Attach target Aura attached to a creature or land to another permanent of that type.

* You target the Aura as you cast Enchantment Alteration. You don't choose the permanent to attach it to until Enchantment Alteration resolves. Since that permanent isn't targeted, it may have shroud or otherwise be unable to be targeted.

* It doesn't matter who controls the permanent you move the Aura onto.

* You don't gain control of the Aura. You just move it from one permanent to another.

* As Enchantment Alteration resolves, if the targeted Aura is attached to a creature, you must attach it to a different creature. If the targeted Aura is attached to a land, you must attach it to a different land. If it's attached to a permanent that's both a creature and a land, you can attach it to either a creature or a land.

* You must move the Aura onto a permanent it can legally enchant. If there is no other permanent of the appropriate type that can be enchanted by the targeted Aura (for example, you targeted a blue Aura attached to a creature, and the only other creature on the battlefield has protection from blue), the Aura doesn't move.

Endoskeleton

{2}

Artifact

You may choose not to untap Endoskeleton during your untap step. {2}, {T}: Target creature gets +0/+3 for as long as Endoskeleton remains tapped.

* If Endoskeleton becomes untapped before its activated ability resolves, nothing happens to the targeted creature when that ability resolves. It won't get +0/+3.

Energy Field

{1}{U}

Enchantment

Prevent all damage that would be dealt to you by sources you don't control.

When a card is put into your graveyard from anywhere, sacrifice Energy Field.

* Energy Field's last ability won't trigger when a token or a copy of a spell is put into your graveyard.

Exhaustion

{2}{U}

Sorcery

Creatures and lands target opponent controls don't untap during his or her next untap step.

* This effect tracks the player, not the permanents. During the targeted player's next untap step, no creatures or lands the player controls at that time will untap. This includes creatures and lands the player didn't control at the time Exhaustion resolved. Creatures and lands that player controlled when Exhaustion resolved, but have since left that player's control, are not affected.

* If Exhaustion resolves targeting a player, then another Exhaustion resolves targeting the same player before his or her next untap step, the second Exhaustion will have no additional effect.

Exhume

{1}{B}

Sorcery

Each player puts a creature card from his or her graveyard onto the battlefield.

* First the player whose turn it is chooses a creature card in his or her graveyard (if that player has any), then each other player in turn order chooses a creature card in his or her graveyard, then all chosen creatures are returned to the battlefield at the same time. As a player makes his or her choice, that player will know all the previous choices that have been made.

Exploration

{G}

Enchantment

You may play an additional land on each of your turns.

* As you play a land, announce whether it's your normal land play for the turn or you're playing it as the result of Exploration's ability (or another such effect that exists).

* If you control more than one Exploration, the effects of their abilities are cumulative. If you control two, for example, you can play three lands on your turn.

Falter

{1}{R}

Instant

Creatures without flying can't block this turn.

* For Falter to have any effect, it must be cast before the declare blockers step. Once blockers have been declared, Falter won't undo those blocks.

* Falter affects the game as a whole, rather than affecting creatures' characteristics. Once Falter resolves, no creatures can block that turn, including those that enter the battlefield later on.

Flesh Reaver

{1}{B}

Creature -- Horror

4/4

Whenever Flesh Reaver deals damage to a creature or opponent, Flesh Reaver deals that much damage to you.

* Flesh Reaver's ability triggers and resolves after it has already dealt its combat damage. If you and your opponent each have 4 life and Flesh Reaver deals combat damage to that player, the game will end (and you'll win) before Flesh Reaver deals 4 damage to you.

Fluctuator

{2}

Artifact

Cycling abilities you activate cost you up to {2} less to activate.

* Fluctuator's ability affects all cycling abilities, including mountaincycling, slivercycling, and so on.

Gaea's Bounty

{2}{G}

Sorcery

Search your library for up to two Forest cards, reveal those cards, and put them into your hand. Then shuffle your library.

* Gaea's Bounty lets you find cards with the land type Forest, not just cards with the name Forest. For example, you could find a Forest, a Snow-Covered Forest, a Stomping Ground, a Savannah, and/or a Murmuring Bosk, among other options.

Gamble

{R}

Sorcery

Search your library for a card, put that card into your hand, discard a card at random, then shuffle your library.

* You might end up discarding the card you searched for.

Gilded Drake

{1}{U}

Creature -- Drake

3/3

Flying

When Gilded Drake enters the battlefield, exchange control of Gilded Drake and up to one target creature an opponent controls. If you don't make an exchange, sacrifice Gilded Drake. This

ability can't be countered except by spells and abilities. (This effect lasts indefinitely.)

* If there are no legal targets to choose for Gilded Drake's triggered ability, or you choose not to target a creature, you'll put the ability on the stack without choosing a target. When the ability resolves, you'll sacrifice Gilded Drake.

* If you choose a target for Gilded Drake's triggered ability, but that target has become illegal by the time the ability resolves (because it has left the battlefield, gained protection from blue, or any other reason), the ability will resolve anyway. (This is the only ability that works this way.) You'll sacrifice Gilded Drake.

* If the targeted opponent somehow gains control of Gilded Drake after its second ability triggers but before it resolves, and that opponent also retains control of the targeted creature, Gilded Drake's ability will resolve and have no effect. No exchange happens because the same player controls both creatures, but you can't sacrifice Gilded Drake because you no longer control it.

* If an exchange actually happens, the effect has no duration. You'll retain control of the targeted creature until the game ends, it leaves the battlefield, or some other effect causes it to change control. The same is true regarding that creature's former controller and Gilded Drake.

Goblin Cadets

R

Creature -- Goblin

2/1

Whenever Goblin Cadets blocks or becomes blocked, target opponent gains control of it. (This removes Goblin Cadets from combat.)

* When Goblin Cadets blocks or becomes blocked, this ability triggers just once, no matter how many creatures Goblin Cadets blocked or became blocked by.

* The ability resolves during the declare blockers step. Goblin Cadets is removed from combat, so it neither deals nor is dealt combat damage. Any creatures it blocked remain blocked for the rest of combat. Any creatures that blocked it remain blocking creatures for the rest of combat.

* The ability's effect has no duration. The targeted opponent retains control of Goblin Cadets until the game ends, it leaves the battlefield, or some other effect causes it to change control (such as its own ability in a later turn).

Goblin Lackey

{R}

Creature -- Goblin

1/1

Whenever Goblin Lackey deals damage to a player, you may put a Goblin permanent card from your hand onto the battlefield.

* A Goblin permanent card is any creature card with the creature type Goblin, or the tribal enchantment card Boggart Shenanigans, which also has the creature type Goblin.

Goblin Matron

{2}{R}

Creature -- Goblin

1/1

When Goblin Matron enters the battlefield, you may search your library for a Goblin card, reveal that card, and put it into your hand. If you do, shuffle your library.

* You may search for any creature card with the creature type Goblin, or any tribal card with the creature type Goblin. Whether a card has "Goblin" in its name is irrelevant.

Greater Good

{2}{G}{G}

Enchantment

Sacrifice a creature: Draw cards equal to the sacrificed creature's power, then discard three cards.

* The sacrificed creature's last existence on the battlefield is checked to determine its power.

* You must discard three cards regardless of how many cards you drew. If you have fewer than three cards in your hand, you'll discard your hand.

Greener Pastures

{2}{G}

Enchantment

At the beginning of each player's upkeep, if that player controls more lands than each other player, the player puts a 1/1 green Saproling creature token onto the battlefield.

* This ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless the player whose turn it is controls more lands than each other player as his or her upkeep starts, and (2) the ability will do nothing if another

player controls at least as many lands as that player by the time it resolves.

Hermetic Study

{1}{U}

Enchantment -- Aura

Enchant creature

Enchanted creature has "{T}: This creature deals 1 damage to target creature or player."

* The controller of the enchanted creature (not necessarily the controller of Hermetic Study) can activate the ability.

Hidden Predators

{G}

Enchantment

When an opponent controls a creature with power 4 or greater, if Hidden Predators is an enchantment, Hidden Predators becomes a 4/4 Beast creature.

* This ability is a "state trigger." Once a state trigger triggers, it won't trigger again as long as the ability is on the stack. If the ability is countered and the trigger condition is still true, it will immediately trigger again.

* See "'Sleeping' Enchantments" in the General Notes section above.

Hidden Stag

{1}{G}

Enchantment

Whenever an opponent plays a land, if Hidden Stag is an enchantment, Hidden Stag becomes a 3/2 Elk Beast creature. Whenever you play a land, if Hidden Stag is a creature, Hidden Stag becomes an enchantment.

* Hidden Stag's second ability has an "intervening 'if' clause" that checks to see if it's still a creature. That means (1) the ability won't trigger at all unless Hidden Stag is still a creature at the time you play a land, and (2) the ability will do nothing if Hidden Stag has somehow ceased to be a creature by the time it resolves. (In other words, that ability won't trigger while Hidden Stag is an enchantment.)

* Once Hidden Stag's second ability resolves, Hidden Stag is no longer a creature. The card type "enchantment" overwrites the card type "creature" (as well as any other card type).

* The second ability's effect has no duration. Hidden Stag remains an enchantment until the game ends, it leaves the battlefield, or some other effect (such as its first ability) causes it to become another card type.

* See "'Sleeping' Enchantments" in the General Notes section above.

Humble

{1}{W}

Instant

Target creature loses all abilities and becomes 0/1 until end of turn.

* Humble overwrites all previous effects that set the targeted creature's power and toughness to specific values. Other effects that set its power or toughness to specific values that start to apply after Humble resolves will overwrite Humble's effect.

* Effects that modify the targeted creature's power or toughness, such as the effects of Giant Growth or Glorious Anthem, will apply to it no matter when they started to take effect. The same is true for counters that change the creature's power or toughness (such as +1/+1 counters) and effects that switch its power and toughness.

* Humble doesn't counter abilities that have already triggered or been activated. In particular, there is no way to cast this to stop a creature's "At the beginning of your upkeep" or "When this creature enters the battlefield" abilities from triggering.

* If the affected creature gains an ability after Humble resolves, it will keep that ability.

Ill-Gotten Gains

{2}{B}{B}

Sorcery

Exile Ill-Gotten Gains. Each player discards his or her hand, then returns up to three cards from his or her graveyard to his or her hand.

* As Ill-Gotten Gains resolves, it's exiled. Then all players discard their hands at the same time. The player whose turn it is chooses 0, 1, 2, or 3 cards in his or her graveyard, then each other player in turn order does the same, then all the chosen cards are returned to their owners' hands at the same time. As a player makes his or her choice, that player will know all the previous choices that have been made.

* The cards that will be returned to a player's hand aren't chosen until Ill-Gotten Gains resolves. No one can respond to these choices by exiling a chosen card, for example.

* Any of the cards a player returns from his or her graveyard to his or her hand may be cards that Ill-Gotten Gains just caused that player to discard.

Imaginary Pet

{1}{U}

Creature -- Illusion

4/4

At the beginning of your upkeep, if you have a card in hand, return Imaginary Pet to its owner's hand.

* This ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless you have at least one card in hand as your upkeep starts, and (2) the ability will do nothing if your hand is empty by the time it resolves.

Jagged Lightning

{3}{R}{R}

Sorcery

Jagged Lightning deals 3 damage to each of two target creatures.

* You must target two creatures as you cast Jagged Lightning. If you can't (because there's just one creature on the battlefield, perhaps), you can't cast the spell.

Karn, Silver Golem

{5}

Legendary Artifact Creature -- Golem

4/4

Whenever Karn, Silver Golem blocks or becomes blocked, it gets -4/+4 until end of turn.

{1}: Target noncreature artifact becomes an artifact creature with power and toughness each equal to its converted mana cost until end of turn. (That artifact retains its abilities.)

* When Karn blocks or becomes blocked, its first ability triggers just once, no matter how many creatures Karn blocked or became blocked by.

* Karn's last ability causes the targeted artifact to become a creature in addition to its other card types, subtypes, and supertypes.

* If the targeted artifact has an {X} in its mana cost, the value of X is 0 for purposes of determining its converted mana cost.

* Karn's last ability doesn't remove any abilities the targeted artifact may have.

* A noncreature permanent that turns into a creature may be affected by the "summoning sickness" rule: It can attack, and its activated abilities with {T} in the cost can be activated, only if its controller has continuously controlled that permanent since the beginning of his or her most recent turn. Note that summoning sickness cares about when that permanent came under that player's control, not when it became a creature.

* If a noncreature artifact becomes an artifact creature due to Karn's second ability and then another effect animates it, the new effect overrides Karn's ability's effect. For example, Karn's ability would make Chimeric Staff become a 4/4 creature. If you activate Chimeric Staff's ability and choose X = 5, Chimeric Staff will be a 5/5 artifact creature for the rest of the turn.

* If an Equipment becomes a creature, it can no longer equip a creature. If it's currently attached to a creature, it becomes unattached (but remains on the battlefield). You can activate the Equipment's equip ability, but it won't do anything.

Lifeline

{5}

Artifact

Whenever a creature is put into a graveyard from the battlefield, if another creature is on the battlefield, return the first card to the battlefield under its owner's control at the beginning of the next end step.

* This ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless another creature is on the battlefield at the time the first creature is put into a graveyard, and (2) the ability will do nothing if no creatures are on the battlefield by the time it resolves.

* It matters only that there's a creature on the battlefield. It doesn't matter who controls it. It also doesn't matter if the creature on the battlefield at the time Lifeline's ability triggers is the same as the creature on the battlefield at the time Lifeline's ability resolves.

* If Lifeline's ability resolves, it creates a delayed triggered ability that will return the creature card from its owner's graveyard to the battlefield under its owner's control at the beginning of the next end step. It doesn't matter if there are any other creatures on the battlefield as that end step starts. It also doesn't matter if Lifeline remains on the battlefield.

* The delayed triggered ability returns the creature card to the battlefield only if it's still in the graveyard when the delayed ability resolves, and has been there continuously since Lifeline's ability triggered.

* If there are two or more creatures on the battlefield, and they're all put into the graveyard at the same time, Lifeline's ability will trigger for each of them. (The game "looks back in time" to determine the game state just before any "leaves the battlefield" abilities trigger, so Lifeline considers all those creatures to still be on the battlefield for this purpose.) However, unless a creature enters the battlefield before those abilities resolve, they won't do anything. The creature cards will stay in the graveyard.

* If Lifeline causes multiple creatures to return to the battlefield at the beginning of the end step, they return one at a time as the individual delayed triggered abilities resolve. First the player whose turn it is puts his triggers on the stack in any order, then each other player in turn order does the same, then the triggers resolve in the reverse of the order they were put onto the stack.

Lingering Mirage

{1}{U}

Enchantment -- Aura

Enchant land

Enchanted land is an Island.

Cycling {2} ({2}, Discard this card: Draw a card.)

* The enchanted land loses its existing land types and any abilities printed on it. It now has the land type Island and has the ability to tap to add {U} to its controller's mana pool. Lingering Mirage doesn't change the enchanted land's name or whether it's legendary, basic, or snow.

Lurking Evil

{B}{B}{B}

Enchantment

Pay half your life, rounded up: Lurking Evil becomes a 4/4 Horror creature with flying.

* If your life total is 0 or less but an effect is preventing you from losing the game, you may activate Lurking Evil's ability by paying 0 life. (It's always possible to pay 0 life, regardless of what your life total is.)

* See "'Sleeping' Enchantments" in the General Notes section above.

Mana Leech

{2}{B}

Creature -- Leech

1/1

You may choose not to untap Mana Leech during your untap step.

{T}: Tap target land. It doesn't untap during its controller's untap step for as long as Mana Leech remains tapped.

* If Mana Leech becomes untapped before its activated ability resolves, nothing happens to the targeted land when that ability resolves. It won't become tapped.

Meltdown

{X}{R}

Sorcery

Destroy each artifact with converted mana cost X or less.

* If an artifact on the battlefield has an {X} in its mana cost, the value of X is 0 for purposes of determining its converted mana cost.

Mishra's Helix

{5}

Artifact

{X}, {T}: Tap X target lands.

* You may target any lands, regardless of whether they're tapped or untapped.

Monk Realist

{1}{W}

Creature -- Human Monk Cleric

1/1

When Monk Realist enters the battlefield, destroy target enchantment.

* The "enters the battlefield" ability is not optional. If you're the only player who controls an enchantment, you'll have to target one of your own.

No Rest for the Wicked

{1}{B}

Enchantment

Sacrifice No Rest for the Wicked: Return to your hand all creature cards in your graveyard that were put there from the battlefield this turn.

* It doesn't matter who controlled the creature cards when they were on the battlefield. As long as they were put into your graveyard this turn, you get to put them into your hand.

* When the ability resolves, return to your hand all creature cards in your graveyard that were put there from the battlefield this turn, including any that were put into your graveyard before No Rest for the Wicked entered the battlefield.-----

Noetic Scales

{4}

Artifact

At the beginning of each player's upkeep, return to its owner's hand each creature that player controls with power greater than the number of cards in his or her hand.

* As the ability resolves, the number of cards in the active player's hand is determined, as is the power of each creature that player controls. Then all appropriate creatures are returned to their owners' hands at the same time.

Opal Acrolith

{2}{W}

Enchantment

Whenever an opponent casts a creature spell, if Opal Acrolith is an enchantment, Opal Acrolith becomes a 2/4 Soldier creature.

{0}: Opal Acrolith becomes an enchantment.

* Opal Acrolith's second ability may be activated at any time, even while it's an enchantment. However, it won't do anything unless Opal Acrolith is another card type when it resolves.

* If Opal Acrolith was a creature, then once its second ability resolves, it's no longer a creature. The card type "enchantment" overwrites the card type "creature" (as well as any other card type).

* If Opal Acrolith was attacking or blocking when its second ability resolves, it's removed from combat, so it neither deals nor is dealt combat damage. Any creatures it blocked remain blocked for the rest of combat. Any creatures that blocked it remain blocking creatures for the rest of combat.

* The second ability's effect has no duration. Opal Acrolith remains an enchantment until the game ends, it leaves the battlefield, or some other effect (such as its first ability) causes it to become another card type.

* See "'Sleeping' Enchantments" in the General Notes section above.

Opal Titan

{2}{W}{W}

Enchantment

When an opponent casts a creature spell, if Opal Titan is an enchantment, Opal Titan becomes a 4/4 Giant creature with protection from each of that spell's colors.

* As Opal Titan's ability resolves, it checks the colors of the spell as it currently exists on the stack, not the colors of the spell as it was cast. If that spell is no longer on the stack (because it was countered, for example), it checks the spell's last existence on the stack.

* If the spell is colorless, Opal Titan doesn't get a protection ability.

* See "'Sleeping' Enchantments" in the General Notes section above.

Oppression

{1}{B}{B}

Enchantment

Whenever a player casts a spell, that player discards a card.

* If a player casts a spell, Oppression's ability triggers and is put on the stack on top of that spell. The ability will resolve before the spell does.

* If, at the time Oppression's ability resolves, the player has no cards in hand, Oppression's ability won't do anything. Note that the spell that caused Oppression's ability to trigger is on the stack at this point, not in the player's hand, so it can't be affected.

Outmaneuver

{X}{R}

Instant

X target blocked creatures assign their combat damage this turn as though they weren't blocked.

* Once an attacking creature has been blocked, it remains a blocked creature for the rest of combat, even if all the creatures that blocked it have been removed from combat.

* If a creature is attacking a planeswalker, assigning its damage as though it weren't blocked means the damage is assigned to that planeswalker, not to the defending player. If the planeswalker is no longer controlled by the defending player, the attacking creature's combat damage won't be assigned at all.

* The blocked creatures are still dealt damage as normal by the creatures blocking them.

Pariah

{2}{W}

Enchantment -- Aura

Enchant creature

All damage that would be dealt to you is dealt to enchanted creature instead.

* "You" refers to Pariah's controller, not necessarily the enchanted creature's controller.

* If multiple prevention and/or replacement effects modify how damage would be dealt to you, you choose the order to apply the effects. It's possible that after applying one of them, the others will no longer be applicable (or wouldn't be applicable by you) because you would no longer be dealt damage.

* In particular, suppose you control Pariah and a planeswalker, and a source controlled by an opponent would deal noncombat damage to you. Both Pariah and the planeswalker have effects that change (or could change) what that damage would be dealt to. You choose one to apply.

-- If you apply Pariah's effect, the damage is redirected to the enchanted creature. The planeswalker replacement effect is no longer applicable.

-- If you apply the planeswalker replacement effect, your opponent then chooses whether he or she wants to redirect the damage to your planeswalker. If your opponent does, that many loyalty counters are removed from it. If your opponent doesn't, then Pariah's effect applies and the damage is redirected to the enchanted creature.

* If the damage that would be dealt to you is combat damage or unpreventable damage, it will still be combat damage or unpreventable damage after it has been redirected.

Path of Peace

{3}{W}

Sorcery

Destroy target creature. Its owner gains 4 life.

* Note that the targeted creature's owner, not its controller, gains 4 life.

* A token's owner is the player under whose control it entered the battlefield.

* If the targeted creature is an illegal target by the time Path of Peace resolves, the entire spell is countered. No one gains life.

Pendrell Flux

{1}{U}

Enchantment -- Aura

Enchant creature

Enchanted creature has "At the beginning of your upkeep, sacrifice this creature unless you pay its mana cost."

* Mana cost includes color.

* If the enchanted creature has an {X} in its mana cost, the value of X is 0 for purposes of determining its mana cost.

* Unless they're copies of other creatures, token creatures have no mana costs. Land creatures (such as Dryad Arbor) also have no mana costs. If such a creature is enchanted with Pendrell Flux, it will have to be sacrificed since its mana cost is unpayable.

* If the enchanted creature has an ability that allows you to pay an alternative cost "rather than pay [this creature's] mana cost" (such as Allosaurus Rider and Salvage Titan do, for example), you may pay the alternative cost rather than the creature's mana cost as Pendrell Flux's ability resolves.

* No other abilities that modify cost payments (such as affinity, convoke, or Fist of Suns's ability, for example) can be applied to the Pendrell Flux payment because they apply only to costs you pay as you're casting a spell.

Persecute

{2}{B}{B}

Sorcery

Choose a color. Target player reveals his or her hand and discards all cards of that color.

* You don't choose a color until Persecute resolves. Once you choose a color, it's too late for anyone to respond (such as by casting an instant of the chosen color).

Pestilence

{2}{B}{B}

Enchantment

At the beginning of the end step, if no creatures are on the battlefield, sacrifice Pestilence.

{B}: Pestilence deals 1 damage to each creature and each player.

* The first ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless there are no creatures on the battlefield as the end step starts, and (2) the ability will do nothing if there's a creature on the battlefield by the time it resolves.

Phyrexian Ghoul

{2}{B}

Creature -- Zombie

2/2

Sacrifice a creature: Phyrexian Ghoul gets +2/+2 until end of turn.

* You can sacrifice Phyrexian Ghoul to activate its own ability, but it won't be around to get the bonus.

* If you sacrifice an attacking or blocking creature during the declare blockers step, it won't deal combat damage. If you wait until the combat damage step, but that creature has been dealt lethal damage, it'll be destroyed before you get a chance to sacrifice it.

Phyrexian Processor

{4}

Artifact

As Phyrexian Processor enters the battlefield, pay any amount of life.

{4}, {T}: Put an X/X black Minion creature token onto the battlefield, where X is the life paid as Phyrexian Processor entered the battlefield.

* You may pay 0 life as Phyrexian Processor enters the battlefield. If you do, activating its second ability will put a 0/0 creature token onto the battlefield. Unless an effect (such as the one from Glorious Anthem) is boosting its toughness, it will be put into the graveyard as a state-based action. If nothing else, "enters the battlefield" and "leaves the battlefield" abilities will trigger as a result.

Planar Void

{B}

Enchantment

Whenever another card is put into a graveyard from anywhere, exile that card.

* This is a triggered ability, not a replacement ability (like the one seen on Leyline of the Void). Cards will actually be put into their owner's graveyards. Each of those cards will be exiled when Planar Void's triggered ability resolves, but only if it's

still in the graveyard at that time, and has been there continuously since Planar Void's ability triggered.

* If a spell such as Disenchant destroys Planar Void, first Planar Void is put into its owner's graveyard. Then, when the spell finishes resolving, it is also put into its owner's graveyard. Since Planar Void is no longer on the battlefield, its ability won't trigger and the spell is not exiled.

* Although this ability triggers when a nontoken permanent is put into a graveyard from the battlefield, it doesn't *specifically* trigger on permanents leaving the battlefield, so it doesn't behave like a "leaves the battlefield" ability. That means that if Planar Void and another nontoken permanent are put into the graveyard at the same time, Planar Void's ability will not trigger for that card.

Power Sink

{X}{U}

Instant

Counter target spell unless its controller pays {oX}. If he or she doesn't, that player taps all lands with mana abilities he or she controls and empties his or her mana pool.

* There are two outcomes to Power Sink:

-- If the targeted spell's controller pays {X}, nothing else happens.

-- If the targeted spell's controller doesn't pay {X}, the spell is countered, each land with a mana ability that player controls becomes tapped, and that player's mana pool is emptied.

Priest of Titania

{1}{G}

Creature -- Elf Druid

1/1

{T}: Add {G} to your mana pool for each Elf on the battlefield.

* Priest of Titania's ability counts all Elf permanents on the battlefield, including itself and Elf permanents controlled by other players.

Purging Scythe

{5}

Artifact

At the beginning of your upkeep, Purging Scythe deals 2 damage to the creature with the least toughness. If two or more creatures are tied for least toughness, you choose one of them.

* This ability isn't targeted. A creature with shroud, for example, can be dealt damage this way.

* Purging Scythe deals damage to the creature with the least toughness regardless of who controls it. It may deal damage to your own creatures.

* If the creature on the battlefield with the least toughness has protection from artifacts, it is still chosen this way, though the 2 damage that would be dealt to it is prevented.

Rain of Filth

{B}

Instant

Until end of turn, lands you control gain "Sacrifice this land: Add {B} to your mana pool."

* Only lands you control at the time Rain of Filth resolves gain the ability.

* Although the ability granted by Rain of Filth is a mana ability, it doesn't have {T} in its cost. The ability can be activated whether or not the land is tapped. Activating it isn't tapping a land for mana, so effects like the ones from Fertile Ground and Contamination will ignore it.

Rain of Salt

{4}{R}{R}

Sorcery

Destroy two target lands.

* You must target two lands as you cast Rain of Salt. If you can't (because there's just one land on the battlefield, perhaps), you can't cast the spell.

Reclusive Wight

{3}{B}

Creature -- Zombie Minion

4/4

At the beginning of your upkeep, if you control another nonland permanent, sacrifice Reclusive Wight.

* This ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless you control another nonland permanent as your upkeep starts, and (2) the ability will do nothing if you don't control another nonland permanent by the time it resolves.

Redeem

{1}{W}

Instant

Prevent all damage that would be dealt this turn to up to two target creatures.

* You may target 0, 1, or 2 creatures.

Remembrance

{3}{W}

Enchantment

Whenever a nontoken creature you control is put into a graveyard from the battlefield, you may search your library for a card with the same name as that creature, reveal it, and put it into your hand. If you do, shuffle your library.

* The ability's effect checks the creature's last existence on the battlefield to determine its name. For example, if a Clone copying a Runeclaw Bear causes Remembrance's ability to trigger, you'll search for a Runeclaw Bear card, not a Clone card.

Reprocess

{2}{B}{B}

Sorcery

Sacrifice any number of artifacts, creatures, and/or lands. Draw a card for each permanent sacrificed this way.

* You don't choose which permanents to sacrifice (and, therefore, you don't sacrifice them) until Reprocess resolves. Once you decide which permanents to sacrifice, no player can respond.

* You may sacrifice zero permanents if you want.

Retaliation

{2}{G}

Enchantment

Creatures you control have "Whenever this creature becomes blocked by a creature, this creature gets +1/+1 until end of turn."

* This ability granted to a creature by Retaliation may trigger multiple times per combat. For example, if a creature you control becomes blocked by three creatures, this ability will trigger three times. That creature will wind up with a total of +3/+3 until end of turn, even if some or all of those blocking creatures are removed from combat before the abilities resolve.

Retromancer

{2}{R}{R}

Creature -- Viashino Shaman

3/3

Whenever Retromancer becomes the target of a spell or ability, Retromancer deals 3 damage to that spell or ability's controller.

* If Retromancer becomes the target of a spell or ability, Retromancer's ability triggers and is put on the stack on top of that spell or ability. Retromancer's ability will resolve first.

Sanctum Guardian

{1}{W}{W}

Creature -- Human Cleric

1/4

Sacrifice Sanctum Guardian: The next time a source of your choice would deal damage to target creature or player this turn, prevent that damage.

* As you activate Sanctum Guardian's ability, you target the creature or player that would be the recipient of the damage. As the ability resolves, you choose a source of damage.

Scald

{1}{R}

Enchantment

Whenever a player taps an Island for mana, Scald deals 1 damage to that player.

* This ability is not a mana ability. It goes on the stack and can be responded to.

* The ability will trigger each time a land with the land type Island, not just a land with the name Island, is tapped for mana. Each ability is separate.

* If any Islands are tapped for mana while a player is casting a spell or activating an ability, Scald's ability will trigger that many times and wait. When the player finishes casting that spell or activating that ability, it's put on the stack, then Scald's triggered abilities are put on the stack on top of it. The Scald abilities will resolve first.

* On the other hand, a player can tap Islands for mana, let the Scald triggered abilities be put on the stack, and then respond to those abilities by casting an instant or activating an ability using that mana. In that case, the spell or ability will resolve first.

Scoria Wurm

{4}{R}

Creature -- Wurm

7/7

At the beginning of your upkeep, flip a coin. If you lose the flip, return Scoria Wurm to its owner's hand.

* If you win the flip, nothing happens. Scoria Wurm remains on the battlefield.

Serra Avatar

{4}{W}{W}{W}

Creature -- Avatar

/

Serra Avatar's power and toughness are each equal to your life total.

When Serra Avatar is put into a graveyard from anywhere, shuffle it into its owner's library.

* Serra Avatar's power and toughness are continuously calculated, regardless of where it is.

* The second ability triggers when Serra Avatar is put into its owner's graveyard from any zone, not just from on the battlefield.

* Although this ability triggers when Serra Avatar is put into a graveyard from the battlefield, it doesn't *specifically* trigger on Serra Avatar leaving the battlefield, so it doesn't behave like a "leaves the battlefield" ability. The ability will trigger from the graveyard. That means that if Serra Avatar had lost this ability while on the battlefield (due to Humble, for example) and then was put into its owner's graveyard, the ability would still trigger and it would get shuffled into its owner's library.

However, if Serra Avatar lost this ability when it was put into the graveyard (due to Yixlid Jailer, for example), the ability wouldn't trigger and Serra Avatar would remain in the graveyard.

* If Serra Avatar leaves the graveyard after its second ability triggers but before it resolves, Serra Avatar won't get shuffled into its owner's library. Similarly, if a replacement effect has Serra Avatar move to a different zone instead of being put into the graveyard, the ability won't trigger at all.

Serra's Hymn

{W}

Enchantment

At the beginning of your upkeep, you may put a verse counter on Serra's Hymn.

Sacrifice Serra's Hymn: Prevent the next X damage that would be dealt this turn to any number of target creatures and/or players,

divided as you choose, where X is the number of verse counters on Serra's Hymn.

* If there are any verse counters on Serra's Hymn as you activate the second ability, the number of targets you choose must be at least 1 and at most X, where X is the number of verse counters on it at this time. You divide the damage prevention shields as you put the ability on the stack, not as it resolves. Each target must be assigned at least 1 damage prevention shields.

* If there are no verse counters on Serra's Hymn as you activate the second ability, you must choose zero targets. (The ability won't do anything as a result.)

Shivan Gorge

Legendary Land

{T}: Add {1} to your mana pool.

{2}{R}, {T}: Shivan Gorge deals 1 damage to each opponent.

* The damage is dealt by a colorless source, not a red one.

Show and Tell

{2}{U}

Sorcery

Each player may put an artifact, creature, enchantment, or land card from his or her hand onto the battlefield.

* First the player whose turn it is chooses an appropriate card in his or her hand (if that player has any), then each other player in turn order chooses an appropriate card in his or her hand, then all chosen cards are put onto the battlefield at the same time. Although the chosen cards will be indicated (so a player can't change his or her mind later), they'll remain hidden until they're put into the battlefield. You won't know what your opponent has chosen when making your choice.

* If the cards being put onto the battlefield also require choices (such as a card that says "As [this card] enters the battlefield, choose a color"), those choices are made after all players have chosen their cards, but before anyone has seen what the other players have chosen. First the player whose turn it is makes the necessary choices for his or her card (if any), then each other player in turn order does the same. Players may write these choices down to keep them hidden until all of the chosen cards enter the battlefield and become known.

Shower of Sparks

{R}

Instant

Shower of Sparks deals 1 damage to target creature and 1 damage to target player.

* You must target a creature and a player as you cast Shower of Sparks. If you can't (because there are no creatures on the battlefield, perhaps), you can't cast the spell.

* You may target any player, not necessarily the targeted creature's controller.

Skittering Skirge

{B}{B}

Creature -- Imp

3/2

Flying

When you cast a creature spell, sacrifice Skittering Skirge.

* If you cast a creature spell, Skittering Skirge's ability triggers and is put on the stack on top of that spell. The ability will resolve before the spell does.

Sleeper Agent

{B}

Creature -- Minion

3/3

When Sleeper Agent enters the battlefield, target opponent gains control of it.

At the beginning of your upkeep, Sleeper Agent deals 2 damage to you.

* The effect of Sleeper Agent's first ability has no duration. The targeted opponent retains control of Sleeper Agent until the game ends, it leaves the battlefield, or some other effect causes it to change control.

* The "you" in Sleeper Agent's second ability refers to its controller, who will most likely be the opponent you gave control of it to.

Smokestack

{4}

Artifact

At the beginning of your upkeep, you may put a soot counter on Smokestack.

At the beginning of each player's upkeep, that player sacrifices a permanent for each soot counter on Smokestack.

* At the beginning of your upkeep, both of Smokestack's abilities trigger. You can have them resolve in either order, which means

that you can sacrifice a permanent for each soot counter on it before putting a new soot counter on it (if you decide to add a counter at all).

Sneak Attack

{3}{R}

Enchantment

{R}: You may put a creature card from your hand onto the battlefield. That creature gains haste. Sacrifice the creature at the beginning of the next end step.

* If you put a creature onto the battlefield with Sneak Attack, but you no longer control it at the beginning of the next end step (because another player has gained control of it, or because it left the battlefield and returned as a new permanent, perhaps), you won't sacrifice it.

* The creature you put onto the battlefield this way gains haste for as long as it remains on the battlefield.

Somnophore

{2}{U}{U}

Creature -- Illusion

2/2

Flying

Whenever Somnophore deals damage to a player, tap target creature that player controls. That creature doesn't untap during its controller's untap step for as long as Somnophore remains on the battlefield.

* Somnophore's ability triggers whenever it deals any damage to a player, not just combat damage.

* If Somnophore leaves the battlefield before its triggered ability resolves, nothing happens to the targeted creature when that ability resolves. It won't become tapped.

* Somnophore's effect doesn't end when Somnophore untaps, deals damage again, or changes controllers. It can affect multiple creatures at once. Each time Somnophore deals damage to a player, you target a creature that player controls. You may target the same creature repeatedly (though doing so will have no additional effect on it).

* If a spell or ability untaps a creature that's being affected by Somnophore, Somnophore's effect on that creature doesn't end. If that creature becomes tapped again, Somnophore will continue to prevent it from untapping during its controller's untap step.

* If a creature that's being affected by Somnophore changes controllers, Somnophore's effect will continue to prevent it from untapping during its new controller's untap step.

Songstitcher

{W}

Creature -- Human Cleric

1/1

{1}{W}: Prevent all combat damage that would be dealt this turn by target attacking creature with flying.

* Whether the targeted creature has flying is checked only when the ability is activated and when it resolves. If that creature loses flying before it would deal combat damage, that damage is still prevented.

Soul Sculptor

{2}{W}

Creature -- Human

1/1

{1}{W}, {T}: Target creature becomes an enchantment and loses all abilities until a player casts a creature spell.

* Once Soul Sculptor's ability resolves, the targeted creature is no longer a creature. The card type "enchantment" overwrites the card type "creature" (as well as any other card type).

* As enchantments with no abilities, the affected permanents will just sit on the battlefield doing nothing until something else affects them or Soul Sculptor's effect ends.

* Everything else about the permanent remains the same. For example, Rootwalla turns into a green enchantment that's still named Rootwalla. Its mana cost is still {2}{G}. If it has any counters on it, or has been affected by any spells or abilities, they continue to affect it. For example, if Rootwalla's ability was activated before it became an enchantment, and it becomes a creature again later in the turn, it will have +1/+1.

* If the targeted creature was attacking or blocking when Soul Sculptor's ability resolves, it's removed from combat, so it neither deals nor is dealt combat damage. Any creatures it blocked remain blocked for the rest of combat. Any creatures that blocked it remain blocking creatures for the rest of combat.

* Soul Sculptor's ability can't counter abilities that have already triggered or been activated. In particular, there is no way to activate this ability to stop a creature's "When this creature enters the battlefield" abilities from triggering.

* If the affected permanent gains an ability after Soul Sculptor's ability resolves, it will keep that ability.

* As soon as any player casts a creature spell, all of Soul Sculptor's effects immediately end. This doesn't use the stack, and it happens before the new creature spell resolves. It doesn't matter whether Soul Sculptor is still on the battlefield at this time.

* A creature spell becomes cast (thus ending Soul Sculptor's effects) as the last stage of the casting process. If a permanent affected by Soul Sculptor normally has an ability that affects when or how a creature spell can be cast (such as Teferi, Mage of Zhalfir does), or alters the cost to do so (such as Jade Leech does), that ability will not exist in time to affect the next creature spell that's cast. However, if that permanent normally has an ability that can trigger when a creature spell is cast (such as Kor Firewalker does), that ability will be regained in time to trigger.

Spined Fluke

{2}{B}

Creature -- Worm Horror

5/1

When Spined Fluke enters the battlefield, sacrifice a creature.

{B}: Regenerate Spined Fluke.

* If you control no other creatures when Spined Fluke's "enters the battlefield" ability resolves, you'll have to sacrifice Spined Fluke itself.

Sporogenesis

{3}{G}

Enchantment

At the beginning of your upkeep, you may put a fungus counter on target nontoken creature.

Whenever a creature with a fungus counter on it is put into a graveyard from the battlefield, put a 1/1 green Saproling creature token onto the battlefield for each fungus counter on that creature.

When Sporogenesis leaves the battlefield, remove all fungus counters from all creatures.

* If a creature with at least one fungus counter on it is put into a graveyard, the second ability of each Sporogenesis on the battlefield triggers. Each one will produce a number Saproling tokens equal to the number of fungus counters that were on that creature as it left the battlefield. It doesn't matter which Sporogenesis those fungus counters came from.

* When a Sporogenesis leaves the battlefield, all fungus counters are removed from all creatures, regardless of whether they came from that Sporogenesis or not. Fungus counters that have wound up on noncreature permanents stay where they are.

* If Sporogenesis leaves the battlefield after its first ability has triggered but before it has resolved, its third ability will trigger and remove all fungus counters from all creatures. Then its first ability will resolve, and you can put a fungus counter on the targeted creature. That counter will remain there indefinitely, but it won't serve any purpose unless there's another Sporogenesis on the battlefield at the time that creature is put into a graveyard.

Spreading Algae

{G}

Enchantment -- Aura

Enchant Swamp

When enchanted land becomes tapped, destroy it.

When Spreading Algae is put into a graveyard from the battlefield, return Spreading Algae to its owner's hand.

* Spreading Algae can enchant a land with the land type Swamp, not just a land with the name Swamp.

Stern Proctor

{U}{U}

Creature -- Human Wizard

1/2

When Stern Proctor enters the battlefield, return target artifact or enchantment to its owner's hand.

* The "enters the battlefield" ability is not optional. If you're the only player who controls an artifact or enchantment, you'll have to target one of your own.

Sulfuric Vapors

{3}{R}

Enchantment

If a red spell would deal damage to a permanent or player, it deals that much damage plus 1 to that permanent or player instead.

* If a spell causes damage to be dealt, that spell will always identify the source of the damage. In most cases, the source is the spell itself. For example, Lightning Bolt says "Lightning Bolt deals 3 damage to target creature or player." If the source is not a red spell, Sulfuric Vapors won't affect it.

* If multiple effects modify how damage will be dealt, the player who would be dealt damage or the controller of the creature that would be dealt damage chooses the order to apply the effects. For example, Mending Hands says, "Prevent the next 4 damage that would be dealt to target creature or player this turn." Suppose a red spell would deal 4 damage to a player who has cast Mending Hands targeting him or herself, and Sulfuric Vapors is on the battlefield. The player who would be dealt damage can either (a) prevent 4 damage first, in which case the red spell would no longer deal damage to him or her, so Sulfuric Vapors does nothing, or (b) apply Sulfuric Vapors's effect, which increases the damage from 4 to 5, then prevent 4 damage, taking 1 damage.

* If a red spell would deal damage to multiple recipients (as Earthquake does, for example), Sulfuric Vapors causes that spell to deal 1 more damage to each of those recipients.

* If a red spell divides damage among multiple recipients, the damage is divided first. Then Sulfuric Vapors's effect increases the damage that would be dealt to each recipient.

* If a red spell an opponent controls would deal damage to you and you control a planeswalker, Sulfuric Vapors will increase the damage that spell deals regardless of whether your opponent chooses to have it deal its damage to you or to your planeswalker. It doesn't matter in what order those replacement effects are applied.

* The effects of multiple Sulfuric Vapors are cumulative. Two such effects will cause the damage a red spell would deal to a creature or permanent to be increased by 2; three such effects will cause the damage a red spell would deal to a creature or permanent to be increased by 3.

Symbiosis

{1}{G}

Instant

Two target creatures each get +2/+2 until end of turn.

* You must target two creatures as you cast Symbiosis. If you can't (because there's just one creature on the battlefield, perhaps), you can't cast the spell.

Tainted Æther

{2}{B}{B}

Enchantment

Whenever a creature enters the battlefield, its controller sacrifices a creature or land.

* The player who has to sacrifice a creature or land is the player who controls the creature at the time Tainted Æther's ability resolves, not necessarily the player under whose control the creature entered the battlefield. If the creature is no longer on the battlefield as the ability resolves, the creature's last controller must sacrifice a creature or land.

* If the creature's controller controls no other creatures or lands, that player will have to sacrifice the creature that caused Tainted Æther's ability to trigger.

Telepathy

{U}

Enchantment

Your opponents play with their hands revealed.

* For rules purposes, each player's hand is always considered a "hidden zone," even if it's being revealed.

Temporal Aperture

{2}

Artifact

{5}, {T}: Shuffle your library, then reveal the top card. Until end of turn, for as long as that card remains on top of your library, play with the top card of your library revealed and you may play that card without paying its mana cost. (If it has X in its mana cost, X is 0.)

* "You may play the card" means you may play it if it's a land, and you may cast it if it's not a land.

* If you play a card "without paying its mana cost," you can't pay any alternative costs. You can pay additional costs, such as conspire costs and kicker costs.

* The revealed card is played using the normal timing rules for that card, as well as any other applicable restrictions. For example, you can't play the card during your combat phase unless it's an instant or has flash. Similarly, if the revealed card is a land, you can't play it unless it's the main phase of your turn, the stack is empty, and you haven't yet played a land that turn.

* If your library is shuffled or the revealed card otherwise leaves the top of your library (including if it leaves because you play it), the ability's effect ends.

* If the card remains revealed until the turn ends but you don't play it, it's simply turned face down and remains on top of your library.

Thran Quarry

Land

At the beginning of the end step, if you control no creatures, sacrifice Thran Quarry.

{T}: Add one mana of any color to your mana pool.

* The first ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless you control no creatures as the end step starts, and (2) the ability will do nothing if you control any creatures by the time it resolves.

Titania's Chosen

{2}{G}

Creature -- Elf Archer

1/1

Whenever a player casts a green spell, put a +1/+1 counter on Titania's Chosen.

* If a player casts a green spell, this ability triggers and is put on the stack on top of that spell. The ability will resolve before the spell does.

Treefolk Seedlings

{2}{G}

Creature -- Treefolk

2/*

Treefolk Seedlings's toughness is equal to the number of Forests you control.

* Treefolk Seedlings's toughness is continuously calculated, regardless of where it is.

* The ability checks for lands with the land type Forest, not just lands with the name Forest.

Turnabout

{2}{U}{U}

Instant

Choose artifact, creature, or land. Tap all untapped permanents of the chosen type target player controls, or untap all tapped permanents of that type that player controls.

* You don't choose which type of permanent you're affecting until Turnabout resolves. Similarly, you don't decide whether you're tapping or untapping them until Turnabout resolves. By the time you make these choices, it's too late for any player to respond.

Umbilicus

{4}

Artifact

At the beginning of each player's upkeep, that player returns a permanent he or she controls to its owner's hand unless he or she pays 2 life.

* A player with less than 2 life can't pay 2 life, so he or she must return a permanent.

* A player who controls no permanents may choose not to pay 2 life. If the player does, the ability doesn't do anything.

Vampiric Embrace

{2}{B}{B}

Enchantment -- Aura

Enchant creature

Enchanted creature gets +2/+2 and has flying.

Whenever a creature dealt damage by enchanted creature this turn is put into a graveyard, put a +1/+1 counter on that creature.

* Each time a creature is put into a graveyard from the battlefield, check whether the enchanted creature had dealt any damage to it at any time during that turn. (This includes damage dealt before the creature was enchanted by Vampiric Embrace.) If so, Vampiric Embrace's last ability will trigger. It doesn't matter who controlled the creature or whose graveyard it was put into.

* The +1/+1 counter is put onto the creature enchanted by Vampiric Embrace at the time the ability triggered. The counters will remain on that creature even if it stops being enchanted by that Aura.

* If the enchanted creature and a creature it dealt damage to are both put into a graveyard at the same time, Vampiric Embrace's last ability will trigger, but it will do nothing when it resolves.

Veiled Crocodile

{2}{U}

Enchantment

When a player has no cards in hand, if Veiled Crocodile is an enchantment, Veiled Crocodile becomes a 4/4 Crocodile creature.

* This ability is a "state trigger." Once a state trigger triggers, it won't trigger again as long as the ability is on the stack. If the ability is countered and the trigger condition is still true, it will immediately trigger again.

* The ability will trigger any time a player's hand is empty, even if that occurs only momentarily during the resolution of a spell or ability (such as Tolarian Winds, for example).

* See "'Sleeping' Enchantments" in the General Notes section above.

Veiled Sentry

{U}

Enchantment

When an opponent casts a spell, if Veiled Sentry is an enchantment, Veiled Sentry becomes an Illusion creature with power and toughness each equal to that spell's converted mana cost.

If the spell is no longer on the stack when the triggered ability resolves, the converted mana cost of the spell is still remembered.

* Converted mana cost takes into account only the mana symbols printed in the upper right corner of the card. Veiled Sentry doesn't care about additional costs, alternative costs, cost-reduction effects, or what you actually paid to play the spell.

* While a spell with {X} in its cost is on the stack, its converted mana cost takes the chosen value of X into account. For example, if an opponent casts Blaze (a spell with the mana cost {X}{R}) and choose a values of 5 for that X, Veiled Sentry will become a 6/6 creature.

* If an opponent casts a spell with converted mana cost 0, Veiled Sentry becomes a 0/0 creature. Unless an effect (such as the one from Glorious Anthem) is boosting its toughness, it will be put into the graveyard as a state-based action.

* As Veiled Sentry's ability resolves, if the spell that caused it to trigger is no longer on the stack (because it was countered, for example), it checks the spell's last existence on the stack to determine its converted mana cost.

* See "'Sleeping' Enchantments" in the General Notes section above.

Veiled Serpent

{2}{U}

Enchantment

When an opponent casts a spell, if Veiled Serpent is an enchantment, Veiled Serpent becomes a 4/4 Serpent creature that can't attack unless defending player controls an Island.

Cycling {2} ({2}, Discard this card: Draw a card.)

* When Veiled Serpent's ability resolves, it states that it can't attack unless defending player controls an Island. This is an effect of the ability that has resolved, but it's not a static ability granted to the creature. If the creature loses all abilities, for example, it still won't be able to attack unless defending player controls an Island.

* The effect checks for lands with the land type Island, not just lands with the name Island.

* See "'Sleeping' Enchantments" in the General Notes section above.

Venomous Fangs

{2}{G}

Enchantment -- Aura

Enchant creature

Whenever enchanted creature deals damage to a creature, destroy the other creature.

* The ability triggers whenever the enchanted creature deals any damage to another creature, not just combat damage.

* This ability isn't deathtouch. It will trigger when damage is dealt, go on the stack, and resolve later. If the damage dealt to the other creature is enough to destroy it, it would have to regenerate to keep from being destroyed by lethal damage, then regenerate again when this ability resolves.

Vernal Bloom

{3}{G}

Enchantment

Whenever a Forest is tapped for mana, its controller adds {G} to his or her mana pool (in addition to the mana the land produces).

* This mana ability triggers each time a land with the land type Forest, not just a land with the name Forest, is tapped for mana.

Viashino Sandswimmer

{2}{R}{R}

Creature -- Viashino

3/2

{R}: Flip a coin. If you win the flip, return Viashino Sandswimmer to its owner's hand. If you lose the flip, sacrifice Viashino Sandswimmer.

* Once the outcome of the coin flip has been determined, it's too late for players to respond. In particular, you can't activate the ability again to reflip the coin.

Viashino Weaponsmith

{3}{R}

Creature -- Viashino

2/2

Whenever Viashino Weaponsmith becomes blocked by a creature, Viashino Weaponsmith gets +2/+2 until end of turn.

* This ability may trigger multiple times per combat. For example, if Viashino Weaponsmith becomes blocked by three creatures, this ability will trigger three times. Viashino Weaponsmith will wind up with a total of +6/+6 until end of turn, even if some or all of those blocking creatures are removed from combat before the abilities resolve.

Victimize

{2}{B}

Sorcery

Choose two target creature cards in your graveyard. Sacrifice a creature. If you do, return the chosen cards to the battlefield tapped.

* You can't target the creature you sacrifice; the targets are chosen as you cast Victimize, but you don't sacrifice a creature until it resolves.

* As Victimize resolves, you must sacrifice a creature if possible. If you are able to do so, you return the two targeted creature cards from your graveyard to the battlefield tapped. If you are unable to sacrifice a creature (because you don't control any), Victimize does nothing.

* If one of the targeted cards has become an illegal target (because it left your graveyard, perhaps) by the time Victimize resolves, you'll still have to sacrifice a creature and you'll return the other targeted creature to the battlefield tapped. If both of the targeted cards have become illegal targets by the time Victimize resolves, Victimize is countered. You won't sacrifice a creature.

Wall of Junk

{2}

Artifact Creature -- Wall

0/7

Defender (This creature can't attack.)

Whenever Wall of Junk blocks, return it to its owner's hand at end of combat. (Return it only if it's on the battlefield.)

* If Wall of Junk blocks, it's returned to its owner's hand at end of combat only if it's still on the battlefield at that time, and has been there continuously since it blocked.

Waylay

{2}{W}

Instant

Put three 2/2 white Knight creature tokens onto the battlefield. Exile them at the beginning of the next cleanup step.

* The tokens are the color white and have name and creature type Knight. They are not functionally identical to the card White Knight.

* Waylay has an unusual "at the beginning of the next cleanup step" trigger. The Knight tokens it creates are exiled after the active player discards down to his or her maximum hand size, all damage marked on permanents is removed, and all "until end of turn" and "this turn" effects end. Since this ability triggers during the cleanup step, players may play instants and abilities during this step (which they usually can't). After that cleanup step ends, another one begins.

* There's no way to cast Waylay during one turn and have the tokens it creates remain on the battlefield into the next turn.

Wild Dogs

{G}

Creature -- Hound

2/1

At the beginning of your upkeep, if a player has more life than each other player, that player gains control of Wild Dogs. Cycling {2} ({2}, Discard this card: Draw a card.)

* This ability has an "intervening 'if' clause." That means (1) the ability won't trigger at all unless a player has a higher life total than each other player as your upkeep starts, and (2) the ability will do nothing unless a player has a higher life total than each other player by the time it resolves.

* If one player has more life than each other player at the time the ability triggers, and a different player has more life than each other player at the time the ability resolves, the latter player gains control of Wild Dogs.

* This effect has no duration. The player with more life than each other player retains control of Wild Dogs until the game

ends, it leaves the battlefield, or some other effect (such as its own ability in a future turn) causes it to change control.

Wildfire

{4}{R}{R}

Sorcery

Each player sacrifices four lands. Wildfire deals 4 damage to each creature.

* First the player whose turn it is chooses four lands he or she controls (or chooses all of them if that player controls fewer than four), then each other player in turn order does the same, then all chosen lands are sacrificed at the same time. As a player makes his or her choice, that player will know all the previous choices that have been made. Then Wildfire deals 4 damage to each creature.

Wirecat

{4}

Artifact Creature -- Cat

4/3

Wirecat can't attack or block if an enchantment is on the battlefield.

Whether an enchantment is on the battlefield matters only at the time Wirecat is declared as an attacker or declared as a blocker. Once Wirecat attacks or blocks, putting an enchantment onto the battlefield won't undo that.

Witch Engine

{5}{B}

Creature -- Horror

4/4

Swampwalk

{T}: Add {B}{B}{B|}B to your mana pool. Target opponent gains control of Witch Engine. (Activate this ability only any time you could cast an instant.)

* Because Witch Engine's activated ability is targeted, it is not a mana ability. It can be activated only at a time you can cast instants and activate non-mana abilities. It goes on the stack and can be responded to.

* Witch Engine's control-change effect has no duration. The targeted opponent retains control of Witch Engine until the game ends, it leaves the battlefield, or some other effect (such as its ability being activated again) causes it to change control.

Wizard Mentor

{2}{U}

Creature -- Human Wizard

2/2

{T}: Return Wizard Mentor and target creature you control to their owner's hand.

* Wizard Mentor is returned to its owner's hand as its ability resolves. If the targeted creature is an illegal target by that time, the ability is countered and Wizard Mentor remains on the battlefield.

* On the other hand, if Wizard Mentor has left the battlefield by the time the ability resolves, the ability will continue to resolve. The targeted creature will be returned to its owner's hand.

* You may target Wizard Mentor itself with its ability.

Worship

{3}{W}

Enchantment

If you control a creature, damage that would reduce your life total to less than 1 reduces it to 1 instead.

* Worship's ability applies only if you control a creature and your life total is being reduced by damage. Other effects or costs (such as "lose 1 life" or "pay 1 life") can reduce your life total below 1 as normal.

* If an effect asks you to pay life, you can't pay more life than you have.

* Worship's ability is not a prevention effect. It will even stop unpreventable damage from reducing your life total below 1.

* Worship's ability doesn't change how much damage is dealt; it just changes how much life that damage makes you lose. For example, if your life total is 3, you control Worship and a creature, and an opponent's creature with lifelink deals 5 damage to you, you'll lose only 2 life (bringing your life total to 1), but your opponent will still gain all 5 life.

* Worship won't prevent you from losing the game if your life total is 0 or less, or some other effect causes you to lose the game.

* If you're dealt damage while your life total is 0 or less (and some effect, such as the one from Platinum Angel, is keeping you from losing the game), Worship has no effect. It won't cause your life total to become 1.

Yawgmoth's Edict

{1}{B}

Enchantment

Whenever an opponent casts a white spell, that player loses 1 life and you gain 1 life.

* If an opponent casts a white spell, this ability triggers and is put on the stack on top of that spell. The ability will resolve before the spell does.

Yawgmoth's Will

{2}{B}

Sorcery

Until end of turn, you may play cards from your graveyard.

If a card would be put into your graveyard from anywhere this turn, exile that card instead.

* "You may play cards" means you may play a card if it's a land, and you may cast a card if it's not a land.

* Each card you play from your graveyard is played using the normal timing rules for that card, as well as any other applicable restrictions. For example, you can't play the card during your combat phase unless it's an instant or has flash. Similarly, you can't play a land card this way unless it's the main phase of your turn, the stack is empty, and you haven't yet played a land that turn. If it's a nonland card, you'll have to pay its mana cost. The only thing that's different is you're playing it from your graveyard.

* Although Yawgmoth's Will lets you cast cards from your graveyard, those cards don't behave as though they were in your hand. In particular, you can't cycle cards from your graveyard.

* Yawgmoth's Will's replacement effect applies to any card that would be put into your graveyard for any reason, not just to instants and sorceries you cast from your graveyard due to Yawgmoth's Will's first ability. Unlike Planar Void (which has a triggered ability), this effect prevents cards from ever entering your graveyard. As a result, abilities that trigger when a card or permanent is put into your graveyard won't trigger.

* When Yawgmoth's Will finishes resolving, its own replacement effect will cause it to be exiled rather than being put into your graveyard.
